

# ARID ENVIROCLEAN

## Waterless Urinal Cleaning System

ARID Enviroclean tablets and Arid Enviroclean liquid Cleaner are part of the ARID Enviroclean Waterless Urinal Cleaning System, a complete sanitising and deodorising solution for use in urinals. As well as delivering exceptional cleaning results and odour control, the ARID Enviroclean waterless system delivers savings of up to 99% of water which would normally be flushed away.

### How to Use

1.	Turn off feed water
2.	Deep clean entire urinal & drain with undiluted ARID Enviroclean Cleaner to remove uric acid, water hardness & odour-causing germs.
3.	Place 1 ARID Enviroclean Tablet in each singular trough, or at intervals of 3-4 spaces in multi-trough's.
4.	Depending on the frequency of use of urinals, clean all surfaces once or twice daily with diluted ARID Enviroclean Cleaner. Do not rinse. (1 part ARID Enviroclean Cleaner: 50 parts water)
5.	Once a week repeat Step 2. Deep clean more often if required, dependent on urinal usage.

#### ARID Enviroclean Liquid Cleaner

ARID Enviroclean liquid cleaner has been developed with a buffered organic acid system with special penetrating emulsifiers, deodorisers and a conditioning agent which coats the urinal's surface with a protective shield to prevent uric acid and germ films forming, thereby preventing malodour at its source.

#### ARID Enviroclean Tablets

Arid Enviroclean tablets are slow release biodegradable urinal tablets designed to dissolve slowly and wash down the urinal. Most odours come from the drain and the urinal's surface. ARID Enviroclean Tablets keep these areas clean and odour free.

Features	Advantages	Benefits
Fast acting	Labour saving	Cost saving
Long life fragrance	Reodorises	Imparts fresh environment
Sanitiser	Kills germs	Safer environment
